Introduction

The National Resident Matching Program (NRMP) conducted a survey of all applicants who participated in the 2009 Main Residency Match and who submitted rank order lists of programs.

The primary purpose of the survey was to shed light on the factors that applicants weigh in selecting programs (1) at which to interview and (2) to rank for the Match. The survey was fielded during the 19 days between the rank order list deadline and Match Week so that applicant match outcomes would not influence respondents' answers.

This report presents survey results by preferred specialty and applicant type. Preferred specialty is defined as the specialty listed first on an applicant's rank order list of programs. Applicant type includes U.S. allopathic seniors and independent applicants. Independent applicants include prior allopathic

graduates, both U.S. citizen and non-U.S. citizen graduates of international medical schools, graduates of schools of osteopathy, graduates of Canadian medical schools, and graduates of the Fifth Pathway program.

The overall response rate for the 19 largest preferred specialties detailed in this report was 44.9 percent and varied by specialty and applicant type (see table below).

The NRMP hopes that program directors, school officials, and applicants find these data useful as they prepare for and participate in the Match.

The NRMP's data reporting and research activities are guided by its Data Release and Research Committee. NRMP data and reports can be found at: www.nrmp.org/data/.
