#### INTRODUCTION

These data have been compiled and published at this time for use by Deans of Student Affairs in advising students and for use by program directors in planning their offering of positions. The report contains three sections; the 1985 Match, Results of the 1984 Match, and the 1983 NRMP-AAMC study of all U.S. Medical School graduates. These data may be reproduced with appropriate attribution to this source.

The data were compiled from reports generated by Elliott Peranson and his staff of Peranco, Ltd. who designed and operate the Matching Program.

The follow-up data in Part III represent a collaborative project carried out by the Division of Student Services of the Association of American Medical Colleges, under the supervision of Richard Randlett and the National Resident Matching Program.

# National Resident Matching Program

One American Plaza - Suite 807/Evanston, Illinois 60201

#### **Sponsoring Organizations**

American Board of Medical Specialfies American Hospital Association American Medical Association American Medical Student Association American Protestant Hospital Association Association of American Medical Colleges Catholic Health Association Council of Medical Specialty Societies

### Hospitals may offer:

# 1985 National Resident Match

- Categorical (C) programs in all specialties.
- Advanced Programs for Students (S) to begin in the second or later post-graduate year.
- Preliminary tracks (P) in Internal Medicine, General Surgery and/or Transitional programs for students who wish a year or more of broad clinical experience.

### Students may apply for:

- Categorical (C) programs in all specialties.
- Advanced Programs for Students (S) to begin in the second or later post-graduate year <u>and</u> for Preliminary track programs to precede such programs in the same match.
- Preliminary track (P) programs if they are less than fully decided or wish to enter programs in the advanced specialties that appoint residents and other physician candidates rather than students.

# 1985 Specialty/Fellowship Matches

### Specialties may offer:

• Advanced Programs for Residents (R) to begin in July 1985 to residents and other physician candidates in a Specialty Match in the fall of 1984 on a schedule of dates selected by the program directors of each specialty. A program in a specialty may offer some positions for July 1986 to students as Advanced Programs for Students (S) in the 1985 National Match and the remainder to residents in a Specialty Match in the fall of 1984.

### Resident and Physician candidates may apply for:

- Any of the Advanced Programs for Residents (R) for which they are eligible in the Specialty/Fellowship Matches.
- Categorical (C) programs in the National Match.

# The Match

The use of the matching program in the admissions process — through which appointments to residencies are made at a uniform time — removes the temporal problems that commonly occur in the admissions process.

- Hospitals and their program directors do not have to guess when and how many acceptances should be sent to applicants. They simply define the number of positions they seek to fill and can rank all acceptable applicants in order of preference. The Match will sequentially offer the positions on their lists until their programs are filled or their lists of applicants are exhausted.
- Applicants do not face the frequent dilemma of having to act on an offer from a less preferred hospital program while waiting for word from a more preferred program. Any positions they are offered are theirs unless they decline them because of receiving offers from more preferred programs. No program can withdraw an acceptance offer made to an applicant. Applicants can list their choices in preference order without regard for the likelihood of acceptance.
- The confidential rank order lists submitted by programs and applicants are the sole determinants of how positions will be offered and accepted.
- Non-participation the offering of positions by program directors and the signing of contracts by applicants outside
  of or prior to the Match is the only reason the Match can fail to provide the most equitable and simplest means for
  the admissions process in graduate medical education.

April 1984

#### I. 1985 MATCH

-2-

FIGURE 1: For 1985 NRMP will again offer three different matching mechanisms for program directors and applicants.

1.) CATEGORICAL PROGRAMS (C): Program directors in the broad clinical specialties that do not require preliminary graduate education - Family Practice, Internal Medicine, Pediatrics, Obstetrics/Gynecology, General Surgery and Pathology - may offer all of their PGY-1 positions in these programs. In addition, the program directors in the Advanced, narrower specialties - those whose specialty boards have requirements for preliminary broad clinical experience - who have made arrangements for such experience may also offer positions in (C) Programs.

2.) ADVANCED PROGRAMS FOR STUDENTS (S): Some program directors in the Advanced Specialties who cannot or do not wish to make such arrangements, but want to appoint senior students through the Match can offer their PGY-2 positions in these (S) programs. Students can intermix choices for (C) and (S) programs on their Rank Order Lists in preference order. Each (S) program can be accompanied by a Supplemental Rank Order List on which the student lists his/her choices for one-year Preliminary (P) Medicine, Surgery or Transitional programs for the PGY-1 year should he/she match to an (S) program. Each student who lists (S) programs on his/her Rank Order List must submit at least one Supplemental, PGY-1 list.

3.) ADVANCED PROGRAMS FOR RESIDENTS/FELLOWS (R): NRMP conducts individual specialty matches for those specialties whose directors wish to appoint residents rather than students to their first year residency positions (see page 9).

Program directors may use one or more of these mechanisms. For example, a director of a program in an Advanced Specialty who has four positions for first year residents to begin in July 1986 may make arrangements with a director in medicine and offer two positions in a (C) program in the 1985 Match. The other two positions could be offered in the same Match in an (S) program or in an (R) program to residents in the fall of 1985 if the directors in that specialty had instructed NRMP to provide such a Specialty Match.

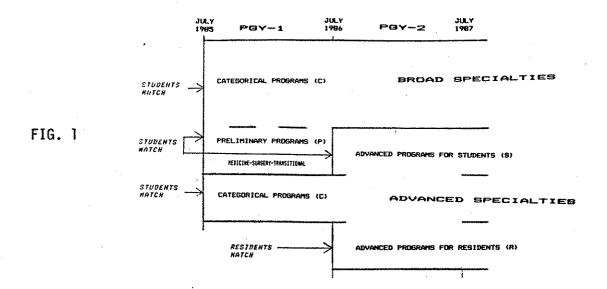

FIGURE 2: This Figure shows the Rank Order List of a student who wants to have his/her residency in Diagnostic Radiology. He/she has applied to programs in Radiology in four hospitals, A, B, C, and D which are located in different cities. The directors of the programs at Hospitals B and C have made arrangements for required, broad, clinical training and offer CATEGORICAL (C) Programs. The directors of the programs at Hospitals A and D have not made such arrangements but wish to appoint senior students in the Match. They offer their positions in ADVANCED PROGRAMS FOR STUDENTS (S).

The student ranks the four hospital programs in preference order and also includes 5th and 6th choices for broad, PGY-1 programs, in case he/she does not match in Radiology. He/she also submits a Supplemental Rank Order List to go with his/her choice for Hospital A containing choices for PGY-1 programs in the city where Hospital A is located. He/she submits another Supplemental Rank Order List to go with his/her 4th choice of Hospital D that has choices for PGY-1 programs in the same city as that of Hospital D.

NRMP will match the student to the most preferred program on his/her Rank Order List that offers a position. If the student should match to his/her 1st choice, the (S) program at Hospital A, a second cycle will attempt to match him/her to a PGY-1 program at Hospitals M, N or O on the Supplemental List for that hospital. If he/she matches to the Categorical Radiology program in either Hospital B or C, the Supplemental Lists will be ignored. If he/she should match to his/her 4th choice, the (S) program at Hospital D, a subsequent cycle will attempt to match him/her to a PGY-1 program at Hospitals P, Q or R.

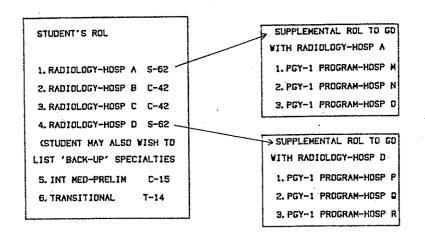

FIG. 2

# NATIONAL RESIDENT MATCHING PROGRAM

# SCHEDULE OF DATES

#### FOR

### THE OFFICIAL COOPERATIVE PLAN FOR FIRST-YEAR APPOINTMENTS IN GRADUATE MEDICAL EDUCATION FOR 1985-86

NOTE: THE NRMP AGREEMENTS AND ITS CONTRACT WITH THE SYSTEMS FIRM PERMIT NO EXCEPTIONS TO THE DEADLINE DATES. ACTUAL RECEIPT AT THE CENTRAL OFFICE OF DOCUMENTS BY THE DEAD-LINE DATES IS MANDATORY. EACH APPLICANT AND HOSPITAL IS STRONGLY URGED TO INCLUDE A SELF-ADDRESSED, STAMPED POST CARD WITH EACH DOCUMENT SO THAT ITS RECEIPT BY NRMP CAN BE VERIFIED.

- 1. MAY 1984. Application materials are sent to medical schools and hospitals.
- 2. JUNE 15 SEPTEMBER 21, 1984. Application materials are sent to Independent Applicants. No materials will be sent after September 21, 1984.
- 3. JULY 20, 1984. Student Agreements and Institution Agreements should be returned by this date.
- 4. SUMMER FALL 1984. All applicants request residency materials directly from hospitals.
- 5. SEPTEMBER 28, 1984. Closing date for RECEIPT (in NRMP office) of Independent Applicant Agreement form for registration in the NRMP.
- 6. OCTOBER 1984. The 1985 NRMP Directory of Hospital Programs will be sent to all participants.
- 7. DECEMBER 1984. Coordinated mailing of candidate and hospital Rank Order Lists and NRMP Directory Supplement.
- 8. DECEMBER 1984. Candidate Directory is sent to hospitals, containing names and NRMP applicant code numbers.
- 9. DECEMBER 13, 1984. Last day for candidates to make application to hospitals for first-year appointments in graduate medical education.
- 10. JANUARY 9, 1985. Closing date for RECEIPT (in NRMP office) of candidate and hospital confidential Rank Order Lists. RANK ORDER LISTS RECEIVED AFTER THIS DATE CANNOT BE PROCESSED.
- 11. FEBRUARY 4, 1985. Confidential Rank Order Lists, as programmed in the computer, are sent to medical schools or directly to Independent Applicants. The confidential program lists, as programmed in the computer, are sent to hospitals. This confirmation "print-out" must be reviewed for accuracy. A correction of errors, but no revisions of ranking will be accepted.
- 12. FEBRUARY 15, 1985. Closing date for RECEIPT (in NRMP office) of corrections of errors in applicant or hospital confidential Rank Order Lists. (All corrections must be in writing.) Any changes to applicant data (e.g. withdrawals, name, address changes, etc.) received after this date cannot be processed. The Matching process begins FEBRUARY 16, 1985.
- 13. MARCH 12, 1985. Names of unmatched applicants and locations of unfilled positions may be released at/but not before 12:00 EST. Unmatched applicants may begin contacting unfilled programs at 12:00 Noon (Eastern Standard Time).
- 14. MARCH 13, 1985. The general announcement of Results occcurs at 12:00 Noon (Eastern Standard Time).
- 15. MARCH 13 -- APRIL 5, 1985. Hospitals should send letters of appointment to matched candidates, who then sign and return the letters of appointment.

Exhibit B

Please print the name of the Director (first, initial, last) of each program offered in the NRMP in the appropriate boxes. Please have the Program Director sign to indicate acceptance of the terms of the Institution Agreement, his or her acknowledgement of the NRMP position that "each institution should list with NRMP all residency programs and positions that are being offered to medical students prior to the completion of their undergraduate medical education regardless of the level of graduate medical education at which training will begin," and that the program offered will have ACGME accreditation for the academic year beginning July 1, 1985.

# Advanced Programs for Residents Specialty Matches

#### **National Resident Matching Program**

One American Plaza Suite 807 Evanston, Illinois 60201

#### Colon and Rectal Surgery Specialty Match 1985-86 Appointments

The NRMP conducts a Matching Program for residency positions to begin in 1985-86 in Colon and Rectal Surgery for the Program Directors in Colon and Rectal Surgery.

All Surgical Residents who are considering or have made application for such residency positions should write to the NRMP for application forms for this Matching Program during June and July.

#### Respiratory Disease Specialty Match 1985-86 Fellowships

The National Resident Matching Program is conducting an Adult Respiratory Disease Matching Program for fellowships which will begin between April and December 1985. Results will be announced September 19, 1984. Programs are listed in the current edition of the *American Review of Respiratory Disease*. Information can also be obtained from the American Thoracic Society/American Lung Association, 1740 Broadway, New York, NY 10019.

All residents and other physician candidates who are considering or have made application for such fellowships should write for an agreement or submit the "Request for Agreement" form to NRMP promptly.

Emergency Medicine Specialty Match (PGY-2) 1985-86 Residency Positions The NRMP conducts a Matching Program for residency positions to begin in 1985 in Emergency Medicine PGY-2 for the Program Directors in Emergency Medicine.

All Residents who are considering application for such residency positions should contact NRMP for application forms for this Matching Program during June and July.

#### Dermatology Specialty Match 1985-86 Residency Positions

The National Resident Matching Program is conducting a Dermatology Matching Program for first year Residency positions which will begin July 1, 1985. Results will be announced October 17, 1984.

All residents and other physician candidates who are considering or have made application for such residencies should write for an agreement or submit a "Request for Agreement" form to NRMP.

-9-

### II. 1984 MATCH RESULTS

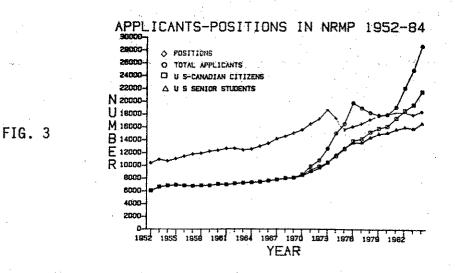

FIGURE 3: The number of initially enrolled applicants and the number of positions offered through the Match during its 32 year history are shown in this figure and in Tables A and B (pp.13-14). The number of positions, shown in diamonds, increased by 505 (2.8%) to 18,457; 433 more were offered in the generalist specialties. Since the sharp decrement of over 2,000 positions that resulted from the demise of the free standing rotating internship from 1974 to 1976, positions offered increased until 1981, then decreased slightly in 1982 and 1983.

The number of U.S. senior students who enrolled, shown by the squares to triangles, increased by 577 to 16,130. The number had dropped from 1982 to 1983, however, as it did from 1976 to 1977 since several schools "lost" classes because of reverting from three year to four year curricula. The increase from 1982 to 1984 represented only 2.2 percentage points.

In addition to the graduating seniors, an increase of other U.S. and Canadian citizens of 37% occurred to 5,376, as shown by the squares. In this category of applicants were included an increase of 81% of Canadian graduates to 188, a 62% increase in osteopaths to 414, an increase of physicians who were previous years' graduates of LCME accredited schools of 26% to 1,427 (a 386% increase since 1981), an increase of U.S. citizen graduates of foreign medical schools (USFMG) of 46% to 2,922 (a 371% increase since 1981) offset by a 5% decrease in 5th Pathway students to 425. The over three-fold increase of U.S. physician graduates reflects the tendency of program directors, who have increasing numbers of current year's graduates, to offer all of their positions through the Match, although they could appoint such physicians outside of the Match. The markedly increased numbers of USFMG are graduates from the new, proprietary schools in the Carribean.

Total applicants to NRMP increased by 15% to a record 28,649 as shown by circles. This remarkable total was due in major part to an increase of 24% of non-U.S. citizen graduates of foreign medical schools (ALFMG) to 7,143, considerably greater than the previous peak of 5,953 in 1976 immediately preceeding the implementation of the Visa Qualifying Examination. There were thus 10,000 more initial applicants to NRMP than there were positions in the Match.

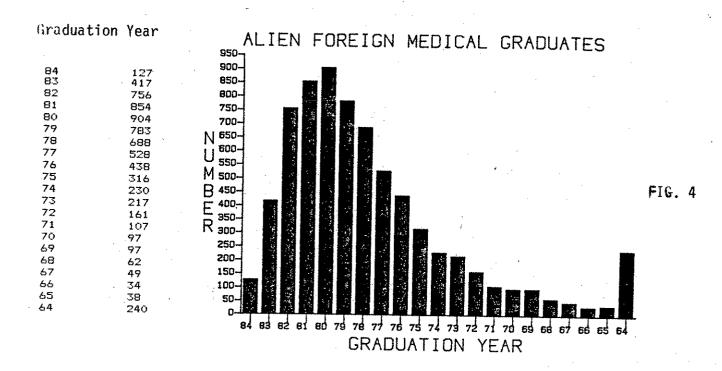

FIGURE 4: The dates of graduation from medical school of the 7,100 alien graduates of foreign medical schools who applied to NRMP in 1984 are shown in this Figure and Table. Only 30% graduated after 1980, 13% in the mode year of 1980 and 57% in 1979 or earlier years, including 3% who graduated prior to 1964. Sixteen percent enrolled in both the 1983 and 1984 Matches.

Prior to the actual Match, 6,597 applicants became inactive (see Table B, p.14); one-quarter withdrew and three-quarters did not submit Rank Order Lists with active choices. Among U.S. seniors only 9% became inactive this year, a decrease of one percentage point attributable to the fact that couples were not permitted to withdraw from the Match in 1984. With the approval of their Deans, 933 students withdrew to accept obligated positions in the military services, because they were January to March graduates who legitimately obtained a position outside of the Match, or because they were not entering a residency for the PGY-1 year. Another 456 did not submit Rank Order Lists with active choices. Presumably, a number of these students submitted to pressure from a few program directors to violate their NRMP agreements by signing contracts early. Among FMG 4,244 became inactive as did 964 previous U.S. graduates, Canadians and Osteopaths.

FIGURE 5: As the Match began, there were 22,052 total active applicants for 18,457 positions, as shown in the bottom line by the circles, a ratio of 0.84 positions per applicant. For all U.S. and Canadian citizens, shown in the middle line by squares, the ratio had decreased from the 1.33 of 1976 to 1.03. For U. S. senior students, shown in the top line by triangles, the ratio has decreased by only 0.12 positions per graduate since 1976, from 1.37 to 1.25. PGY-1 residency positions available for U.S. seniors have thus changed only slightly since the disappearance of the internship.

APPLICANTS IN THE MATCHING PROGRAM MAYADOR9 P86F 01 376F MAYADO89

TABLE B

-11-

POSITIONS/APPLICANTS/UNMATCHED

FIGURE 6: The ratio of positions per active applicant, expressed as a percentage, is shown with triangles as the top line. The other lines show the percentage unmatched of several categories of applicants (see Table B, p.14). The bottom line with diamonds, shows that the percentage of U.S. senior students unmatched has remained below 8 percent regardless of the relationship of positions offered to active applicants. The next most preferred group have been 5th Pathway students, shown as the second line from the bottom by triangles; in 1982, 25% went unmatched, in 1983, 26% and in 1984, 22%. The percentage unmatched of USFMG, shown by circles, increased from 32% in 1981 to 56% in 1984 as the ratio of positions to applicants decreased. Finally, the percentage of unmatched ALFMG shown by squares, reached 76% in 1976 when the percentage of positions to applicants was 96% and 78% in 1984 when the percentage was 83%. It is clear that other categories of applicants do not compete with U.S. seniors when the position-to-applicant ratio drops. If the 4,244 FMG who became inactive are added to the 4,309 who went unmatched, it is apparent that 8,553 of the FMG who applied to the Match in 1984 did not obtain a position. As was pointed out above, many of them have been in the Match in previous years. The magnitude of this group of physicians who cannot obtain the PGY-1 year is disturbing. All but 2 states require at least one year of GME for graduates of foreign schools. We are thus rapidly accumulating a sizeable pool of physicians who are not eligible for licensure.

The specialty distribution of matched applicants is shown in the following three tables. In Table E, "Foreign Graduates" includes 5th Pathway, U.S. citizen FMG and non-U.S. citizen FMG.

TABLE D

TABLE E

The 16,112 applicants who matched filled 87% of the positions offered, an increase of 2 percentage points over 1983. U.S. seniors filled 74% compared with 72% in 1983 and all other applicants matched to 13% of positions in both years. There were 2,398 unfilled positions on Match Day.

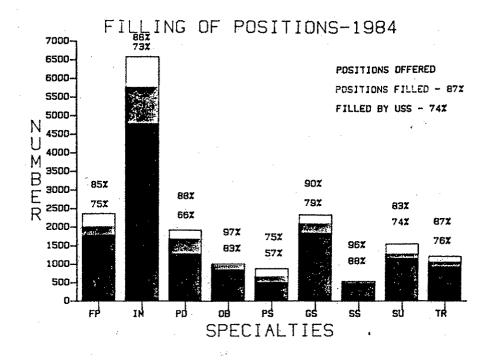

FIG. 7

FIGURE 7: The filling by specialty is examined in this figure and in Table F (p.19). The height of each bar denotes positions offered, the open portion unfilled positions, the shaded portion represents the number of other applicants matched, and the dark portion the number of U.S. senior students. The filling of positions in Family Practice by USS increased by 4 percentage points to 75% from 1983 to 1984 and the total filling from 81% to 85%. The number of positions in Internal Medicine increased by 303 and the filling by USS from 72% to 73%. In Pediatrics 120 more positions were offered, but the filling by USS remained at 66%. In Psychiatry only 57% of positions were filled by USS in both years. In Transitional programs 45 more positions were offered and 76% were filled by USS. The filling of the hospital based Support Specialties of Anesthesiology, Emergency Medicine, Pathology, Physical Medicine and Diagnostic and Therapeutic Radiology by USS increased by 4% to 74%. Within the group AN filled 90%, RD 93% and EM 98%. In Pathology, Physical Medicine and Therapeutic Radiology filling by USS was 55%, 62% and 43% respectively and the totals were 69%, 70% and 47%. The filling of positions in Obstetrics/Gynecology by USS increased from 80% to 83% and total filling from 95% to 97%; only 35 unfilled positions remained. In General Surgery, 50 more positions were offered this year and filling by USS increased from 75% to 79%. In the Surgical Specialties of Neurological Surgery, Orthopedic Surgery, Otolaryngology and Urology, 20 more positions were offered despite the use of a non-NRMP match by NS and OT. Filling by USS increased to 88% and the total to 96%. At the completion of the Match, there were 9 positions unfilled in OR, and 2 in OT and UR.

NOTE: THESE DATA INCLUDE 22 "S" PROGRAMS WITH 55 POSITIONS.

FIGURE 8: The pattern of filling of programs is examined in this Figure. In the Match this year were 3,037 programs with 18,512 positions of which 14,050 (76%) filled with graduates of LCME accredited schools and an additional 2,064 (11%) filled with graduates of non-LCME schools. In the Figure, the positions are divided into those in programs that matched U.S. seniors to 75% to 100% of their positions, shown in the right bar (Group A), those that filled 50% to 74% of their positions shown in the middle bar (Group B), and those that filled 0% to 49%, shown in the left bar. Sixty percent of programs containing 65% of positions in Group A filled an average of 97% of their positions with LCME graduates and 2% with others for a total filling of 99%. These programs appointed 83% of the LCME graduates who matched and only 11% of non-LCME graduates; they had only 123 (5%) of the 2,398 unfilled positions. In sharp contrast, the 26% of the programs containing 21% of the positions that were in Group C filled only 18% of their positions with LCME graduates for a total filling of 97%.

FIG. 8

Included in this group are 15% of the total programs offered, containing 17% of the positions that did not attract a single U.S. senior. Only 5% of LCME graduates who matched were in these programs but they contained 74% of the non-LCME graduates who matched; they had 1,703 (71%) of the unfilled positions. From our follow-up studies during the past 7 years, we can confidently predict that essentially all of the 695 empty positions in the Group A and B programs will be filled by unmatched U.S. seniors, as will about 500 of the 1,700 empty positions in Group C programs. The remaining 1,200 positions will be filled from some of the unmatched non-LCME applicants.

All specialties from the most to the least sought-after had some programs in each Group. The more popular specialties had, of course, fewer Group C programs. With the exception of the most sparsely populated, all states also had some programs in each group although the most popular states also had fewer Group C programs. All of these programs are accredited by the ACGME. The funding of Group C programs reflects a hope for the supervised medical services rendered by house staff as an essential component of their learning. The 3,900 positions they offered in 1984 will be filled by only about 1,200 U.S. seniors, even after all unmatched students are placed. The remainder of their 2,700 positions will be filled primarily by non-LCME graduates who, when added to the over 500 who matched into Group A and B programs, means that at least 3,200 non-LCME graduates will enter the PGY-1 year, plus those placed outside of the Match.

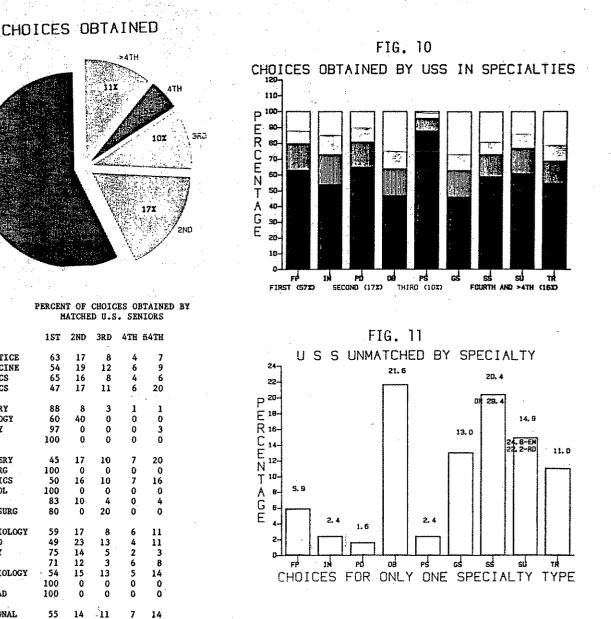

FIGURE 9: The rank-order-list choices obtained by U. S. seniors are shown in the pie chart. Fifty-seven percent obtained their first choice of programs, 17% their second and 10% their third. A total of 74% thus matched to one of their first three choices.

FIGURE 10: Although 88% who sought Psychiatry programs got their first choices, only 46% of those who matched in Obstetrics and General Surgery did so. In those two specialties, one-quarter of the students matched to their fourth or lower choices.

FIGURE 11: Although the mean percentage unmatched of USS was 7.8%, the rate varied markedly among specialties. This figure shows the percentages unmatched of the 76% of students who listed choices for only one type of specialty. The percentage unmatched in the various specialties shown in this figure is directly related to the percentage of positions filled shown in Figure 7.

The percentages below the mean ranged from a low of 1.6% unmatched among those who listed only Pediatric programs (PD), 2.4% in Internal Medicine and Psychiatry, to 5.9% in Family Practice. The percentage was moderately above the mean in Transitional programs(TR), 11%, and General Surgery, 13%. In Obstetrics/Gynecology one out of 5 (21.6%) did not match. Among the Surgical Specialties (SS) 20.4% were unmatched. Within that group 29.4% of those who sought only Orthopedic Surgery failed to obtain a position. Among the Support Specialties, nearly a quarter of those who sought Emergency Medicine and Diagnostic Radiology went unmatched, and 17% of those who sought Anesthesiology.

In Table I, the percentage unmatched of all USS who made a first choice of each specialty is shown together with the ratio of positions per first choice applicant and specialty distributions.

#### III. TOTAL 1983 U.S. GRADUATES

Since 1977, NRMP has conducted a follow-up study through the Deans' offices of medical schools of all U.S. senior students who graduated but did not obtain a PGY-1 position in the Match. In 1983, the project became a joint effort of the NRMP and the AAMC and the data collection was carried out by the AAMC.

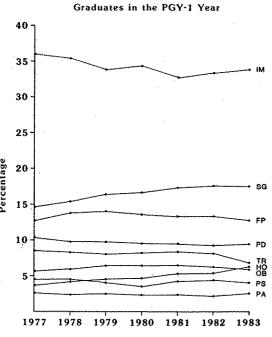

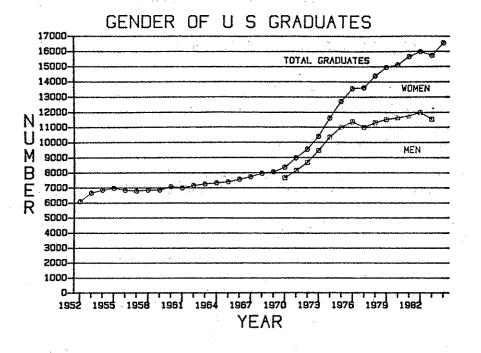

FIGURE 12: The percentage of all graduates who entered Internal Medicine decreased from 36% to 32.8% in 1981, but rose to 33.9% in last year's class. The percentage who entered Surgery, including the surgical specialties, increased from 14.6% to 17.6% in 1982. Family Practice peaked in 1979 at 13.9% and has declined to 12.9%. Pediatrics has decreased one percentage point to 9.2% over the period. Obstetrics increased until 1982. The hospital based specialties have increased 2.5% over the interval. Pathology and Psychiatry have shown little change.

NRMP-AAMC FOLLOW-UP STUDIES OF U.S. MEDICAL SCHOOL CLASSES

-32-

FIG. 13

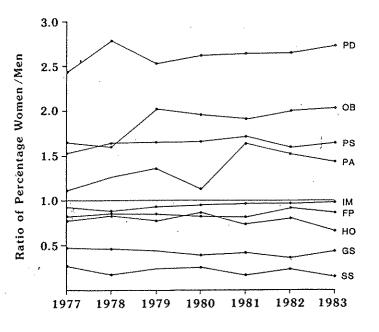

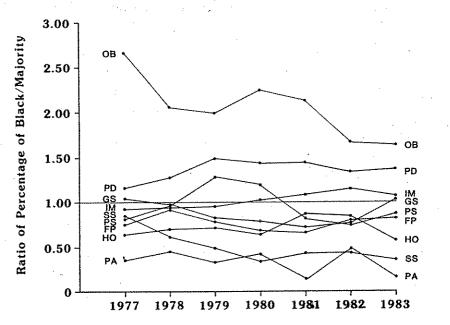

FIG. 14

FIGURE 14: The percentage of women who entered various specialties was divided by the percentage of men and the ratios of percentages (Table L) are plotted in this Figure. During the past 7 years the percentage of women who entered Pediatrics has been 2.5 times as great as of men, 2 times as great in Obstetrics and 1.5 times as great in Psychiatry. The proportion who entered Pathology seems to be rising. The proportions who entered Internal Medicine have become equal. The percentage of women who entered Family Practice and the Hospital based specialties has been somewhat less than that of men. Half the proportion of women enter General Surgery and one-quarter as many entered the Surgical Specialties. -33-

Ratio of Percentages of Blacks to Majority Entering Various Specialties

FIGURE 15: During the past 7 years, although the number of Blacks graduating has increased, the proportion of Black men in the graduating classes has decreased and the proportion of Black women has remained constant (Table K, p.31). Women now constitute 44% of graduating Black medical students. The ratios of Blacks to Caucasians who entered various specialties are shown in this last figure. Obstetrics and Pediatrics have been more preferred by Blacks. The proportions who entered Internal Medicine and General Surgery have become equal and fewer Blacks proportionally entered Family Practice, and the Hospital based specialties, including Pathology, and the Surgical Specialties.
