REVERSION EXAMPLE: NEPRHOLOGY AT NATIONAL HOSPITAL

I.   **The Nephrology program at National Hospital has 7 positions in the Match:**
  - **4 Nephrology–clinical track positions**
  - **3 Nephrology–research track positions**

II. **The fellowship program director chooses to revert, or donate, the following positions if they do not fill when the algorithm is processed:**

  - 2 Nephrology-research track positions   **REVERT →**   to the Nephrology-clinical track

III. **When the algorithm is processed:**
  - **Nephrology-clinical track fills all four of its positions**

  - **Nephrology-research track fills 2 of its 3 positions**

    ↳ **The remaining 1 unfilled Nephrology-research track position reverts to the Nephrology-clinical track**

  - **Nephrology-clinical track fills the additional position reverted from the Nephrology-research track**

Both the Nephrology-clinical and Nephrology-research tracks are considered "filled."

Note: If the position that was reverted from the Nephrology-research track to the Nephrology-clinical track had not filled, the Nephrology-clinical track would have been listed as unfilled in the *List of Unfilled Programs.*
