**Background**

The National Resident Matching Program (NRMP) Specialties Matching Service® (SMS®) conducts Matches for advanced residency and fellowship positions. For the 2018 appointment year, NRMP offered matching services for 63 subspecialties within 25 Matches. A total of 10,778 applicants from U.S. and international medical schools ranked positions and 8,753 obtained fellowship positions.

*Charting Outcomes in the Match: Specialties Matching Service* explores how applicant qualifications affect success in the Fellowship Matches. The first report, published in 2011, was a collaboration between the NRMP and the Association of American Medical Colleges (AAMC). In 2014, NRMP added a Professional Profile section to its Match registration process to collect United States Medical Licensing Examination (USMLE) scores and other applicant characteristics, and those have been used to independently publish all subsequent *Charting Outcomes in the Match* reports. This is the second edition of the *Charting Outcomes in the Match: Specialties Matching Service* and the first using only data collected by the NRMP.

**Methods**

NRMP identified ten applicant characteristics that contribute to Match success: number of contiguous ranks, number of specialties ranked, USMLE Step 1, Step 2 CK, and Step 3 scores, number of research, work, and volunteer experiences, number of publications, and Alpha Omega Alpha Honor Medical Society (AOA) membership (applicable only to U.S. allopathic graduates). All 63 specialties that participated in the Specialties Matching Service are included in the tables and charts for all specialties, but specialty-specific tables and charts are available for only the 24 specialties that offered at least 50 positions and had at least 50 applicants who supplied information for research.

Not all applicants supplied data or gave the NRMP permission to use their self-reported data for research. As a result, missing data exist in most self-reported characteristics: 41.8 percent of USMLE Step 1 scores, 43.2 percent of Step 2 CK scores, 50.5 percent of Step 3 scores, 46.2 percent of research experience data, 45.0 percent of publication data, 48.1 percent of work experience data, and 49.3 percent of volunteer experience data were missing. AOA membership is reported only for previous U.S. graduates, and only 15.7 percent identified themselves as AOA members.

In multiple-specialty Matches, an applicant may rank more than one specialty. It is important to note that for the purpose of this report, Match success is defined as a match to the specialty of the applicant's first-ranked program, or preferred specialty, because that is assumed to be the specialty of choice. Lack of success includes matching to another specialty as well as failure to match at all. No distinction was made based on whether applicants matched to their first, second, third, or lower choice program.

Four applicant groups are included in the report: U.S. allopathic medical school graduates, U.S. citizen international medical school graduates (U.S. IMGs), non-U.S. citizen international medical school graduates (non-U.S. IMGs), and U.S. osteopathic medical school graduates. Because of the small number of applicants, the report does not include Canadian medical school graduates and graduates of Fifth Pathway programs. Osteopathic applicants were excluded from some charts due to the small number of observations.

### Summary

Some general observations apply to all specialties in this report. Applicants who are successful in matching to their preferred specialty are more likely to

- rank more programs within their preferred specialty
- be U.S. graduates
- have higher USMLE Step 1, Step 2, and Step 3 scores
- be members of Alpha Omega Alpha Honor Medical Society (AOA)

Although some other measures seem to be related to Match success for some specialties, the relationships were not consistent enough to draw broad conclusions across specialties. In addition, the data sources used for *Charting Outcomes* did not include other important applicant factors such as program director evaluations, reference letters, and the Medical School Performance Evaluation (MSPE).

Despite the fairly strong relationship between USMLE Step scores and Match success, the distributions of scores show that program directors consider other qualifications, and a high score is not a guarantee of success. Even in the least competitive specialties a few individuals with higher scores are not successful. Neither is a lower score a bar to success.

The data in this report support the following straightforward advice one should give to an applicant

- Rank all the programs you really want, without regard to your estimate of your chances with those programs.
- Include a mix of both highly competitive and less competitive programs within your preferred specialty.
- Include all the programs on your list where the program has expressed an interest in you and where you would accept a position.
- If you are applying to a competitive specialty and you would want to have a fellowship position in the event you are unsuccessful in matching to a program in your preferred specialty, also rank your most preferred programs in an alternate specialty.
- Include all of your qualifications in your application, but know that you do not have to be an AOA member, to have the highest USMLE scores, to have publications, or to have participated in research projects to match successfully.

## Tables and Charts for All Specialties

**Chart  
1**

**Active Applicants in the Specialties Matching Service, 2018 Appointment  
Year  
by Applicant Type**

Source: NRMP Data Warehouse

Chart 1 shows the number of all active applicants who participated in the Specialties Matching Service (applicants who submitted rank order lists of programs) by applicant type. A total of 10,778 active applicants participated for 2018 appointments. U.S. allopathic medical school graduates constituted 55.7 percent of the applicants in the Match. Non-U.S. IMGs, U.S. IMGs, and osteopathic graduates constituted 21.2 percent, 12.3 percent, and 10.2 percent of the applicant pool, respectively.

**Table  
1****Summary Statistics

n/a: Not applicable or little/no reliable data were available.

Source: NRMP Data Warehouse

Note: USMLE Step 1 scores are not available for most osteopathic medical school graduates.

Table 1 provides summary statistics by applicant type and Match outcome on the 10 measures presented in this report. This table reports on all 63 fellowship specialties with 2018 appointments. For specialties with at least 50 positions and at least 50 applicants who provided data for research, data on each of the measures will be displayed graphically by preferred specialty on the following pages. Very few osteopathic applicants reported USMLE scores or the Comprehensive Osteopathic Medical Licensing Examination (COMLEX-USA) scores. Therefore, USMLE and COMLEX scores are not reported for osteopathic applicants in this report.

**Table 2** Number of Applicants and Positions in the Specialties Matching Service, 2018 Appointment Year by Preferred Specialty\*

\*Preferred specialty is the specialty ranked first on an applicant's rank order list.

Source: NRMP Data Warehouse.

Table 2 provides a summary of the numbers of positions offered and applicants who preferred the specialty. The table includes 24 specialties that offered at least 50 positions and had at least 50 applicants who supplied information and gave the NRMP consent to use their information in research. The numbers of applicants matched by applicant type (U.S. graduates, U.S. IMGs, non-U.S. IMGs, and osteopathic graduates) also are provided.

**Chart  
2**

## Ratio - Applicants Ranking Specialty First / Available Positions by Preferred Specialty

CD	Cardiovascular Disease	HO	Hematology and Oncology	MFM	Maternal-Fetal Medicine	PCCM	Pediatric Critical Care Medicine	RNR	Neuroradiology
CHP	Child and Adolescent Psychiatry	HPM	Hospice and Palliative Med	NEP	Nephrology	PDC	Pediatric Cardiology	SCC	Surgical Critical Care
END	Endocrinology, Diabetes, and Metabolism	HS	Hand Surgery	NPM	Neonatal-Perinatal Medicine	PEM	Pediatric Emergency Medicine	SM	Sleep Medicine
GE	Gastroenterology	ID	Infectious Disease	PA	Pediatric Anesthesiology	PM	Pain Medicine	SPM	Sports Medicine
GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Source: NRMP Data Warehouse

Chart 2 shows the ratios of applicants to available positions in each specialty for the four applicant types: U.S. graduates, U.S. IMGs, non-U.S. IMGs, and osteopathic graduates. Using Cardiovascular Disease as an example: for each available position, an average of 0.6 U.S. graduates, 0.2 U.S. IMGs, 0.5 non-U.S. IMGs, and 0.1 osteopathic graduates ranked the specialty first on their rank order list. For Child and Adolescent Psychiatry, Geriatric Medicine, Infectious Disease, Nephrology, Neonatal-Perinatal Medicine, Pediatric Anesthesiology, Neuroradiology, Surgical Critical Care, and Sleep Medicine, there were more available positions than applicants who preferred the specialty. In comparison, for each Gastroenterology position more than 1.5 applicants preferred that specialty.

# Chart 3

## Match Rates

### Percent Matched by Preferred Specialty and Applicant Type

#### U.S. Graduates

#### U.S. International Medical Graduates

#### Non-U.S. International Medical Graduates

#### Osteopathic Graduates

GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Chart 3 shows the percentages of applicants who matched to their preferred specialty by applicant type. Overall, 88.7 percent of U.S. graduates, 68.1 percent of U.S. IMGs, 67.1 percent of non-U.S. IMGs, and 76.1 percent of osteopathic graduates matched to their preferred specialties.

# Chart 4

## Median Number of Contiguous Ranks by Preferred Specialty, Applicant Type, and Match Status

### U.S. Graduates

### U.S. International Medical Graduates

### Non-U.S. International Medical Graduates

### Osteopathic Graduates

Source: NRMP Data Warehouse

CD	Cardiovascular Disease	HO	Hematology and Oncology	MFM	Maternal-Fetal Medicine	PCCM	Pediatric Critical Care Medicine	RNR	Neuroradiology
CHP	Child and Adolescent Psychiatry	HPM	Hospice and Palliative Med	NEP	Nephrology	PDC	Pediatric Cardiology	SCC	Surgical Critical Care
END	Endocrinology, Diabetes, and Metabolism	HS	Hand Surgery	NPM	Neonatal-Perinatal Medicine	PEM	Pediatric Emergency Medicine	SM	Sleep Medicine
GE	Gastroenterology	ID	Infectious Disease	PA	Pediatric Anesthesiology	PM	Pain Medicine	SPM	Sports Medicine
GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

In general, applicants are more likely to match if they rank more programs in their desired specialty. To quantify this aspect of applicant behavior, the number of programs ranked in the first-choice specialty was tallied before a program in another specialty appeared on the applicant's rank order list. Chart 4 provides the median number of contiguous ranks by preferred specialty for each applicant type and by Match outcome. In general, matched applicants had longer contiguous rank lists across applicant types. The principal message of these graphs is that applicants with longer rank order lists are more successful than those with shorter ones.

# Chart 5

## Mean Number of Different Specialties Ranked by Preferred Specialty, Applicant Type, and Match Status

### U.S. Graduates

### U.S. International Medical Graduates

### Non-U.S. International Medical Graduates

### Osteopathic Graduates

GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Most fellowship applicants were interested in only one specialty. However, some Matches included more than one specialty, and applicants in those Matches were able to apply to and rank multiple specialties. For example, applicants in the Medical Specialties Matching Program (MSMP) could apply to both Hematology and Hematology/Oncology. Applicants also could participate in different specialty Matches in the same year, provided the Match Schedule of Dates did not overlap. Chart 5 displays the average number of specialties ranked by applicant type, preferred specialty, and match outcome.

# Chart 6

## USMLE Step 1 Scores of Matched Applicants by Preferred Specialty and Applicant Type

### U.S. Graduates

Matched Not Matched

### U.S. International Medical Graduates

### Non-U.S. International Medical Graduates

GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Chart 6 compares USMLE Step 1 scores for matched and unmatched applicants by specialty. The horizontal bars are the median values for successful applicants and the vertical lines show the interquartile ranges (the range of scores for applicants excluding the top and bottom quarters of the distribution). Scores generally are higher for the more competitive specialties, but there is substantial overlap when specialties are compared. Overall, matched U.S. graduates had mean USMLE Step 1 scores of 233.7 (s.d.=18.8), matched U.S. IMGs had mean scores of 227.8 (s.d.=18.8), and matched non-U.S.IMGs had mean scores 235.7 (s.d.=17.2). Data for osteopathic graduates are not presented because very few osteopathic graduates reported USMLE Step 1 scores.

# Chart 7

## USMLE Step 2 CK Scores of Matched Applicants by Preferred Specialty and Applicant Type

### U.S. Graduates

### U.S. International Medical Graduates

### Non-U.S. International Medical Graduates

GE	Gastroenterology	ID	Infectious Disease	PA	Pediatric Anesthesiology	PM	Pain Medicine	SPM	Sports Medicine
GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Applicants were asked to report the number of research experiences entered in their Electronic Residency Application Service (ERAS) applications. These experiences are not verified or evaluated and may vary greatly. Chart 9 shows the average number of research experiences by applicant type, preferred specialty, and Match outcome. Matched U.S. graduates averaged 4.7 research experiences, the highest among all applicant types. Matched osteopathic applicants averaged 3.1 research experiences, the lowest among all applicant types.

# Chart 10

## Mean Number of Abstracts, Presentations, and Publications After Last Degree by Preferred Specialty, Applicant Type, and Match Status

### U.S. Graduates

Matched Not Matched

### U.S. International Medical Graduates

### Non-U.S. International Medical Graduates

### Osteopathic Graduates

GE	Gastroenterology	ID	Infectious Disease	PA	Pediatric Anesthesiology	PM	Pain Medicine	SPM	Sports Medicine
GM	Geriatric Medicine	IR	Interventional Radiology	PCC	Pulmonary Disease and Critical Care Med	RHU	Rheumatology		

Applicants were asked to list the number of abstracts, presentations, and publications they reported in their ERAS applications. This information is self-reported and may include peer-reviewed articles, abstracts, poster sessions, and invited national or regional presentations. Many applicants reported numerous abstracts, presentations, or publications, sometimes dozens or even hundreds. On average, matched non-U.S. IMGs had the highest number of abstracts, presentations, and publications at 13.5. Matched osteopathic applicants had the fewest, an average of 5.8 publications. Chart 10 shows the average number of publications by applicant type, preferred specialty, and Match outcome.

Applicants were asked to list the number of volunteer experiences they reported in their ERAS applications. Chart 12 provides the average number of volunteer experiences by applicant type, preferred specialty, and Match outcome. On average, matched U.S. graduates had a high of 5.8 volunteer experiences and matched osteopathic applicants had 5.7. Matched non-U.S. IMGs had the least volunteer experience, an average of 3.3.

**Chart  
13**

## Percentage of U.S. Graduates Who are Members of AOA by Preferred Specialty and Match Status

Source: NRMP Data Warehouse

CD	Cardiovascular Disease	HO	Hematology and Oncology	MFM	Maternal-Fetal Medicine	PCCM	Pediatric Critical Care Medicine	RNR	Neuroradiology
CHP	Child and Adolescent Psychiatry	HPM	Hospice and Palliative Med	NEP	Nephrology	PDC	Pediatric Cardiology	SCC	Surgical Critical Care

Membership in Alpha Omega Alpha (AOA), the national medical honor society, is an honor reserved for students with high academic achievement. AOA membership is limited to students in medical schools that sponsor an AOA chapter. Most, but not all, allopathic schools in the United States participate. Only graduate U.S. physicians, Canadians, and a small number of others could legitimately claim membership. For that reason, AOA status for each specialty in Chart 13 is reported only for U.S. graduates.

Data on AOA membership are self-reported. Even for U.S. graduates, however, an analysis of its relationship with success in the Match is limited by the relatively small number of applicants who are members and by the fact that some schools do not have AOA chapters. Overall, 15.7 percent of U.S. graduates included in this report claimed AOA membership. Among applicants who matched to their preferred specialty, 16.7 percent reported AOA membership, compared to 7.5 percent of unmatched applicants.
