NATIONAL RESIDENT MATCHING PROGRAM

The National Resident Matching Program was established in 1952 to provide both applicants and residency program directors a fair opportunity to consider their options for appointment, to make reasoned decisions and to have their decisions announced at a specified time. A brief introduction is followed by the presentation of the results of the NRMP for 1996/97 appointments in graduate medical education.

The first Match was conducted in 1952 when 11,000 internship positions were available for 6,000 U.S. graduating seniors. By 1973 there were 19,000 positions for just over 10,000 U.S. graduating seniors. Following the demise of the internship in 1975, the number of first post-graduate year (PGY-1) positions dropped to 16,000. The number of PGY-1 positions gradually increased to reach 20,772 in the 1994 Match, and has declined slightly to 20,563 this year. [(Figure 1, inside cover) and (Table 1)]. U.S. graduating seniors reached a high in 1985 when 16,179 enrolled in the Match. A small decrease in the number of U.S. graduating seniors occurred each year between 1986 and 1990. The first increase since 1985 was seen in 1991 when 15,268 U.S. seniors enrolled. After another decline in 1992, the number of U.S. seniors again rose to 15,892 for the 1995 Match and declined to 15,707 for the 1996 Match (Table 2).

Many of the tables have been revised from prior issues to distinguish the growing number of PGY-2 programs offered and filled through the Match for appointments beginning July 1997. Applicants matched to these positions will do a year of broad clinical training, generally in a preliminary program such as Internal Medicine, General Surgery, or Transitional. Tables 1

and 2 illustrate the trends in the number of positions and the number of applicants participating in the Match during the past seven years. Many applicants, in addition to U.S. senior medical students, seek residency positions through the NRMP. The different categories of applicants are shown in Table 2. While U.S. physicians (prior year graduates) and osteopathic physicians can be appointed outside of the matching program, program directors increasingly have required these applicants to participate in the Match especially if they are seeking a PGY-2 position, which, while being offered in the 1996 Match, will not begin until July 1997. The low Match rates for PGY-1 positions for these applicants should be interpreted with this fact in mind. U.S. and non-U.S. international medical graduates can also be appointed outside of the Match; however, program directors and applicants are assured of obtaining their most desirable match if they participate fully in the process.

Of particular note is the continuing increase in the number of non-U.S. foreign trained physicians who registered for the 1996 Match (129.3% over the past four years), resulting in a substantial increase (123.5% during the same period) in the number that submitted Rank Order Lists (Active). However, as there was not a corresponding increase in the number of available positions, their success in being matched to a position declined from 63.0% in 1992 to 40.9% in 1996.

The ratios of positions to active applicants from 1971 through 1996 are shown in Table 3. This table was revised three years ago from prior issues and no longer attempts to report ratios of positions to U.S. citizens, a data element which was not available and was assumed in the past to equate with U.S. seniors, which was not

completely accurate. The ratio of PGY-1 positions per active U.S. senior declined from 2.0:1 in 1973 to a low of 1.2:1 in 1985. Since then it gradually increased to 1.5:1 in 1992 and decreased to 1.4:1 in 1995, as a result of a slight decrease in positions and an increase in the number of U.S. seniors. The ratio of such positions to total applicants is quite different. With the influx of applicants who are not U.S. seniors, the ratio of PGY-1 positions to applicants has declined from a high of 1.8:1 in 1971 to a low of 0.8:1 in 1984. During the past ten years, the ratio fluctuated at about one PGY-1 position per active applicant, and was 0.8:1 in the current Match.

Table 4 shows the fluctuation of match rates for U.S. seniors, U.S. IMGs (U.S. citizens trained in foreign medical schools), non-U.S. IMGs (non-U.S. citizens trained in foreign medical schools), and Others, a category which includes Canadian, Osteopathic, Fifth Pathway and U.S. physicians. The match rate for U.S. seniors has fluctuated only slightly from a low of 92.1% in 1982 to a high of 94.0% in 1987. In the current Match, their match rate was again 92.1%. However, the match rates of foreign trained physicians is very different and is clearly directly related to the ratio of available positions per applicant. From 1983 to 1987, when the number of positions was less than the number of total active applicants, their match rates were well below 50.0%. In 1996, as applicants again exceed positions, the match rates for non-U.S. IMGs dropped to 40.9%.

Tables 5 and 6 represent the positions offered and filled in each specialty participating in the NRMP from 1992 through 1996. Table 5 depicts the number of positions offered by specialty and shows the number filled by U.S. seniors and by total applicants. It should be noted that there has been a 0.9% decrease in the total number of first-year positions offered in the Match this year, the number filled by U.S. seniors has decreased by 1.1%, while total filled has increased by 0.8%.

Over the past few years there has been a relatively constant number of PGY-2 positions being offered in the Match. Of particular note is the 80.1% decline over the past three years in the number of U.S. seniors matching into such positions in Anesthesiology. Table 6 provides the same information on positions offered, but indicates the percentage of positions filled in each specialty by U.S. seniors and total applicants. The overall filling of PGY-1 positions declined from a high of 84.1% in 1987 to a low of 77.6% in 1991, rising even higher to 87.6% in 1996. There were increases in the fill ratios for individual specialties, not only in the number of U.S. seniors, but also, their total number filled. The continuing increase in the number and corresponding percentage of U.S. seniors matching to positions in Family Practice, from 1,398 in 1992 to 2,276 in the 1996 Match, is interpreted as a positive response to the need for more primary care physicians. The increase in the number of U.S. seniors matched into Internal Medicine, for the third year in a row, after ten years of decline coupled with the decrease in U.S. seniors matching into Preliminary Internal Medicine in preparation for further specialization, also indicates such a response. However, the eventual "leakage" of Internal Medicine residents into medical sub-specialties, makes it difficult to determine the impact of PGY-1 numbers on eventual numbers of generalists. Pediatrics and Obstetrics & Gynecology also experienced more U.S. seniors matching into PGY-1 programs resulting in fewer positions being filled with non-U.S. seniors. The surgical and support specialties appear to have escaped this trend and continue to maintain more of a constant mix. For those specialties offering a significantly large number of positions in the 1996 Match, Pediatrics, Obstetrics & Gynecology, General Surgery, Orthopaedic Surgery, and Emergency Medicine continued to maintain fill rates above 95%.

Table 7 shows the total number of applicants and the percentages that matched to PGY-1 positions by

specialty. Of particular note is the dramatic decline of applicants matching into Anesthesiology, from 235 in 1988 to only 113 in 1996. Also, Diagnostic-Radiology, which had steadily increased to 426 individuals in 1995, or 2.4% of all matched applicants, took a dive in 1996 to only 348 individuals or 1.9% of matched applicants. One can see a decline in the percentage of total applicants that matched into Family Practice from 1988 until 1991 with an upswing in 1992 which has continued in 1996. Psychiatry, on the other hand, increased to 5.8% in 1988 and then declined to 3.9% in 1994 and has increased to 4.3% of the total applicants in the 1996 Match. However, an examination of the mix of U.S. seniors and those foreign trained reveal that 36.8% of those obtaining a position in Psychiatry were trained in foreign medical schools. General Surgery declined from 7.1% of the total applicants in 1988 to only 5.6% in 1996. Similarly, Transitional programs have declined from a high of 6.5% of the total applicants in 1988 to 4.5% in 1996.

Table 8 represents the total number of U.S. seniors and their corresponding percentages matched to PGY-1 positions by specialty. Here again is evidence of the decline in the percentage matched into Family Practice from 11.1% in 1988 through 1991 and their increase to 17.0% in 1996. Pediatrics and Obstetrics & Gynecology both show a slight but steady rise, with Pediatrics increasing from 9.3% in 1989 to 11.6% in 1996. Emergency Medicine has also experienced a rapid increase in the number of U.S. seniors obtaining a position, from 278 in 1988 to 705 in 1996. Although Obstetrics & Gynecology rose from 6.1% in 1987 to 7.5% in 1993, it declined to 7.2% in 1996. General Surgery also declined from 7.5% of the total number of U.S. seniors matched in 1988 to only 6.6% of those in the 1996 Match. Preliminary programs (PGY-1 year only) also reflects a noticeable decline from 1995. U.S. seniors matching into such in General Surgery, Internal

Medicine and Transitional programs dropped from 16.4% in 1995 to only 13.8% in the 1996 Match.

Table 9 is similar to Tables 7 and 8, but pertains only to foreign trained physicians excluding Canadian applicants and those from Fifth Pathway programs. One can see the reverse of some of the trends reflected in U.S. seniors. Internal Medicine (all categories combined) decreased in the number of U.S. seniors matched as a result of the decrease in preliminary matches, and this was countered with an increase in foreign trained physicians from 1,726 in 1995 to 1,809 in 1996. With the increase in foreign trained physicians participating in the Match, the percent matching to Internal Medicine has declined from 54.2% in 1995 to 53.4% in 1996 of all positions obtained by foreign trained physicians. In numbers since 1988, they have increased by 1,809 positions, a 200.0% increase. As might be expected, specialties that have experienced decreases in U.S. seniors have a corresponding increase in the number of foreign trained physicians matched.

Table 10 was also revised from prior issues three years ago. No longer does it attempt to indicate the number of applications filed by applicants, information which is no longer reported to the NRMP, but rather, reflects the total number of programs ranked by applicants. Hence, an applicant ranking ten different programs would contribute a count of ten to the total. Therefore, the column headed RANK/POSITIONS indicates a measure of the average number each position was ranked. If one examines Table 11, which shows the number of applicants who actually ranked a specialty, one can compute the approximate number of programs ranked by each applicant. For example, 6,511 Emergency Medicine programs were ranked by U.S. seniors. Table 11 shows that 1,091 U.S. seniors ranked at least one Emergency Medicine program or an average of 6.0 programs per applicant; down from 6.3 last year.

Table 11 reports the choices of U.S. seniors and Independent Applicants by specialty. It includes the choices of all applicants without regard to whether the applicants were matched or unmatched. The specialty groups include all program tracks, as well as the advanced programs offered in each specialty. For example, Internal Medicine includes Preliminary, Primary and Categorical as well as Medicine-Pediatrics and Medicine-Psychiatry. A comparison of the total number of U.S. students choosing or ranking Anesthesiology for example, reveals that there were 1.4 times as many PGY-1 positions as there were U.S. senior applicants. In contrast, there were fewer (0.8 times as many) positions offered in Orthopaedic Surgery than there were U.S. seniors seeking such a position.

Table 12 examines the population of U.S. seniors who chose to rank only one type of specialty. This includes 89.1% of all seniors submitting a Rank Order List. High unmatched rates, such as seen for Emergency Medicine (12.9%), Obstetrics & Gynecology (11.9%), and Orthopaedic Surgery (16.2%) reflect that there are more applicants than there are positions. It is understandable that their total PGY-1 "fill ratios" (Table 6) were 98.7%, 96.9%, and 99.4% respectively.

Table 13 shows the number of U.S. seniors who matched to their first, second, third, fourth, fifth or lower ranked programs. The continuing decline in the percent of U.S. seniors obtaining their first choice and corresponding increase in the other categories may be the result of efforts to encourage seniors to reach higher by ranking first their most desirable program without regard to whether or not they will be ranked highly by the program. One should also note that since 1991, Table 13 includes PGY-2 positions as well as PGY-1 and reflects the fact that in the 1996 Match, 750 seniors obtained PGY-1 as well as PGY-2 positions and both are included in the statistics.

Table 14 was also revised two years ago. In the past the statistics included all sub-categories of the Specialty, as well as both PGY-1 and PGY-2 positions. The current issue reflects only PGY-1 positions and is restricted to those specialties or sub-specialties that had 30 or more positions offered in the Match.

Additional Information

The Association of American Medical Colleges (AAMC) assumed the management responsibilities for the NRMP in May, 1989. As of July 1, 1992, the NRMP office in Evanston, Illinois was closed and the operation was moved and incorporated into the AAMC's Section for Student Services in Washington, DC. Data derived from NRMP has been integrated into the AAMC's Student and Applicant Information Management System (SAIMS). Studies are routinely conducted on the characteristics and career development of graduates pursuing various specialties from the time they enter medical school through their post graduate training. Special data requests, pertaining to this or prior matches, can be accommodated and should be directed in writing to:
