## Introduction

In March 2020, the National Resident Matching Program (NRMP) conducted its biennial survey of the directors of all programs participating in the Main Residency Match®. The primary purpose of the survey was to shed light on the factors that program directors use to (1) select applicants to interview and (2) rank applicants for the Match.

The survey was fielded during the 18 days between the Rank Order List Deadline and Match Week so that program match outcomes would not influence respondents' answers.

The survey solicited information on:

- the number of applications received, screened, and reviewed, as well as the number of applicants interviewed and ranked
- the frequency with which programs interview and rank specific applicant groups
- use of test scores in considering which applicants to interview, and
- the factors used for both interview selection and for ranking applicants.

The overall response rate for all specialties in this report was 18.0 percent. Transitional Year programs and programs in 22 specialties with 10 or more responses are included in this report. Response rates are listed in the table below.

In the 2020 Program Director Survey, several new questions were added to learn more about the recruitment process at the program level including whether programs would offer more invitations than interview slots as well as reasons for that practice; time allowed for applicants to respond to interview invitations; and how programs scheduled interviews.

Numbers of responses are presented in most of the graphs, and some graphs use data from multiple survey questions. In those cases, different N's are listed. Numbers of applicants ranked and positions in the Match are extracted from the NRMP database. Graphs are suppressed for questions with fewer than five responses.

This report presents results by specialty on selected items from the survey. The NRMP hopes that program directors, medical school officials, and applicants find these data useful as they prepare for and participate in the Main Residency Match.

The NRMP's data reporting and research activities are guided by its Data Release and Research Committee. NRMP data and reports can be found at: [www.nrmp.org/main-residency-match-data/](http://www.nrmp.org/main-residency-match-data/).

Specialty	Surveys Sent	Number Responding	Response Rate
Anesthesiology	191	33	17.3%
Child Neurology	77	20	26.0%
Dermatology	142	16	11.3%
