# Impact of Length of Rank Order List on Match Results: 2002-2021 Main Residency Match

The NRMP collects data on the average length of the rank order lists (ROL) of matched applicants and filled programs and the average length of rank order lists of unmatched applicants and unfilled programs. The data show that matched applicants and filled programs consistently have longer ROLs than unmatched applicants and unfilled programs.

The data do not take into account a number of other factors that influence the match rate of applicants and the fill rate of programs. Those factors include competitiveness of the applicant, competitiveness of the program, competitiveness of the specialty, and number of interviews completed.

NRMP advises applicants and programs to include all acceptable choices on their rank order lists. A longer ROL in no way affects the chances of matching to choices higher on the ROL.

## **Program Data**

Program data are based on the number of positions offered. Any program with one or more positions unfilled after the matching algorithm has been processed, regardless of the number of positions filled, is included in the unfilled program data. Programs that donated unfilled positions to other programs through reversions are considered unfilled, and the fill status of programs that received reverted positions is based on the original quota.

## U.S. MD Seniors Data

U.S. MD seniors consistently have the highest match rate and the longest average ROLs. Although year-to-year variations occur, 92-95 percent of U.S. MD seniors match each year.

#### U.S. DO Seniors Data

For U.S. DO seniors, participation rates have increased dramatically since 2016, largely in response to the creation of a single accreditation system that commenced in 2015 and the Single Match that commenced in 2020. Increased participation rates likely have contributed to faster growth in average length of ROL compared to U.S. MD seniors or applicants overall.

U.S. DO seniors data are based on applicants' primary rank order lists. Data do not include couples.
