About the NRMP

The National Resident Matching Program (NRMP®) is a private, not-for-profit corporation established in 1953 to optimize the rank-ordered choices of applicants and program directors for clinical training in the United States. The NRMP is not an application processing service nor an interview service; rather, it provides an impartial venue for matching applicants' and programs' preferences for each other using an internationally recognized mathematical algorithm.

Mission

The National Resident Matching Program (The Match®), known for its integrity and transparency, is the foremost provider of reliable and trusted global matching services. The Match facilitates the efficient placement of physician learners to U.S.-based residency and fellowship training programs and leverages its premier data and analyses to enhance the healthcare environment while fostering innovation and advancing professionalism across the transition to residency and the physician workforce.

Vision

To empower a strong global physician workforce through pioneering and innovative matching solutions, novel data-driven insights, and national leadership on issues impacting medical education and ultimately, population health.

Values

Our vision is achieved through our core values and principles:

- Ethics:
 - We act with honesty, trustworthiness, and accountability
- Equity:
 - We ensure access and opportunity for all
- Efficacy:
 - We leverage our experience and expertise to advance transformative and efficient match processes
- Engagement:
 - We cultivate respectful, collaborative, and productive relationships through active listening and courageous and candid communications

For more information about the NRMP, please visit: www.nrmp.org.

NRMP Board of Directors

The NRMP is governed by a 20-member Board of Directors, including:

- Chair, Chair Designate, Secretary/Treasurer, and Immediate Past Chair
- One Designated Institutional Official (DIO)
- One osteopathic physician (DO)
- Two graduate medical education program directors
- Three medical students, one of whom is enrolled in a U.S. DO medical school
- Three resident physicians, one who is a U.S. DO graduate and one who is an international medical graduate (IMG)
- One public or non-physician member
- President and CEO (non-voting)

Officers

- **Board Chair:** Natasha N. Bray, D.O., M.S.Ed, Campus Dean at Oklahoma State University College of Osteopathic Medicine - Cherokee Nation Campus; Associate Dean Accreditation, Oklahoma State University Center for Health Sciences; Associate Program Director for the rural-based Tahlequah Medical Group Internal Medicine Residency Program; Clinical Associate Professor of Rural Medicine
- **Chair Designate:** Michael G. Kavan, Ph.D., Associate Dean, Professor of Family and Community Medicine, and Professor of Psychiatry; Creighton University School of Medicine
- **Secretary/Treasurer:** Jennifer LaFemina, M.D., F.A.C.S., General Surgery Program Director and Associate Professor of Surgery; University of Massachusetts Chan Medical School
- **President and Chief Executive Officer:** Donna L. Lamb, D.H.Sc., M.B.A., BSN., National Resident Matching Program

Board Members, 2026-27

- Cary B. Aarons, M.D., M.S.Ed, F.A.C.S., FASCRS, Program Director, General Surgery Residency and Vice Chair of Education, Department of Surgery Columbia University
- Alizeh Abbas, M.B.B.S., General Surgery Resident, University of Alabama, Birmingham (UAB)
- Humza Ahmed, D.O. Candidate, Arizona College of Osteopathic Medicine
- Glenn T. Ault, M.D., M.S.Ed, Senior Associate Dean, Graduate Medical Education and DIO, University of Southern California, Keck School of Medicine
- Omari Baines-Waiz, D.O., M.B.A., Psychiatry Resident, Atrium Health
- Peter Carek, M.D., M.S., Chair, Department of Family Medicine, Prisma Health
- Deborah Clements, M.D., Chair, Family and Community Medicine, Northwestern University Feinberg School of Medicine
- Jason Collins, M.D. Candidate, Northeast Ohio Medical University
- Emily M. Hawes, PharmD., BCPS, CPP, Professor, University of North Carolina School of Medicine, Department of Family Medicine
- Nicolas Leighton, M.D., General Surgery Resident, University of Southern California
- Mytien Nguyen, M.D./Ph.D. Candidate, Yale School of Medicine
- Maria E. Padilla, M.D., F.A.A.P., MSc, MEdL, Executive Associate Dean of Academic and Student Affairs, NOVA Southeastern University Dr. Kiran C. Patel College of Allopathic Medicine
- Robert L. Phillips Jr., M.D., MSPH, Executive Director, The Center for Professionalism & Value in Health Care
- Steven D. Pletcher, M.D., Program Director, Otolaryngology - Head and Neck Surgery Residency and Vice Chair for Education, University of California, San Francisco
- Marcy L. Verduin, M.D., Senior Associate Dean for Medical Education and Professor of Psychiatry, University of Central Florida College of Medicine
- Colin P. West, M.D., Ph.D., Medical Director for Employee Well-Being, Mayo Clinic

Introduction

Charting Outcomes™: Characteristics of Applicants Who Matched to Their Preferred Specialty examines how applicant attributes affect Match outcomes in the Main Residency Match®. Characteristics examined include the number of contiguous ranks in applicants' preferred specialty (the specialty ranked first on an applicant's rank order list), medical licensure examination results, and research, work, and volunteer experiences. In recent years, separate reports were published for U.S. MD seniors, U.D. DO seniors, and U.S. citizen/non-U.S. citizen IMGs. This year marks the first time that separate reports are being released for U.S. and non-U.S. citizen IMGs in addition to separate reports for U.S. MD seniors and DO seniors. Historically a biennial report, *Charting Outcomes: Characteristics of Applicants Who Matched to Their Preferred Specialty* will now be released annually.

This report showcases non-U.S. IMGs by preferred specialty and Match status. Specialties that offered 50 or more positions in the 2026 Main Residency Match are included. Transitional Year programs are excluded because they are not viewed as a preferred specialty choice. In addition, applicants who ranked a preliminary program first are excluded from any reporting by preferred specialty. After incorporating exclusion criteria, the final sample for analyses included 8,943 non-U.S. IMGs.

In 2026, similar to past years, across most specialties non-U.S. IMGs who match to their preferred specialty are more likely to:

- Rank more programs within their preferred specialty
- Have higher USMLE Step 2 CK scores

These trends, while informative, do not convey the full story. Other applicant factors such as course evaluations, reference letters, and the Medical School Performance Evaluation (MSPE) can also contribute to Match outcomes.

We hope you find this report informative and supportive of specialty considerations and advising.

Definitions

Abstracts

Abstracts represent only the number of abstracts that were accepted for presentation at a professional conference/meeting and were subsequently published in a peer-reviewed journal.

Active Applicant

A medical school senior or graduate who submitted a certified rank order list (ROL) of programs.

Advanced ("A") Position/Program

Specialty position/program that begins the year after the Match and after one or more years of required preliminary training.

AOA

Alpha Omega Alpha national medical honor society.

Categorical ("C") Position/Program

Post-graduate year one (PGY-1) position/program that provides the full training required for board certification in a specialty.

Categorical Primary Care ("M") Position/Program

PGY-1 position/program in Internal Medicine or Pediatrics that provides a training emphasis on primary care.

Certified Position

A position certified by an institution's program to participate in Main Residency Match; also referred to as Offered Position.

COMLEX-USA®

Comprehensive Osteopathic Medical Licensing Examinations®.

Contiguous ranks

Number of programs ranked in the first-choice specialty before a program in another specialty appeared on the applicant's rank order list.

Graduate of Canadian Medical School (Canadian Graduate)

A graduate of a Canadian school of medicine accredited by the Committee on Accreditation of Canadian Medical Schools (CACMS) prior to July 1, 2025. Applicants who graduated from Canadian medical schools after July 1, 2025 are considered International Medical Graduates (IMGs).

Match Rate

The percentage of active seniors who matched to PGY-1 positions when the matching algorithm was processed; also referred to as a PGY-1 Match Rate.

Matched to Preferred

An applicant who matched to a position in their preferred specialty when the matching algorithm was processed; also referred as Matched.

Non-U.S. Citizen Student/Graduate of International Medical School (Non-U.S. IMG)

A non-U.S. citizen who is enrolled in, or is a graduate of, a medical school outside the United States and Canada that is not accredited by the Liaison Committee on Medical Education (LCME), the American Osteopathic Association Commission on Osteopathic College Accreditation (AOA COCA), or the Committee on Accreditation of Canadian Medical Schools (CACMS).

Not Matched

An applicant who did not match to a position in their preferred specialty when the matching algorithm was processed.

PGY-1 & PGY-2

Post-graduate year one and post-graduate year two.

Definitions

Physician ("R") Position/Program

Specialty position/program that begins in the year of the Match and is reserved for physicians with prior graduate medical education. This type of position/program is not available to senior medical students.

Preferred Specialty

The specialty of the first-ranked program on a senior's rank order list, excluding preliminary programs.

Preliminary ("P") Position/Program

One-year transitional or specialty position/program.

Presentations

Presentations represent only the number of presentations that were poster or oral presentations at professional conferences/meetings or school research days/forums.

Publications

Publications represent only the number of publications that were peer-reviewed works such as journal articles, book chapters, and online publications as well as scientific monographs and case reports.

Research Experiences

The number of experiences during medical school, graduate school, or undergraduate school where the applicant reported serving as a member of a research team.

Senior Student of U.S. DO Medical School (U.S. DO Senior)

A student who graduated from American Osteopathic Association (AOA) Commission on Osteopathic College Accreditation (COCA) accredited medical school between June 30 of the calendar year the Match opens and 9 pm eastern time on the Rank Order List Certification Deadline in the year of the Match; also referred to as a DO senior.

Senior Student of U.S. MD Medical School (U.S. MD Senior)

A student who graduated from Liaison Committee on Medical Education (LCME) accredited medical school between June 30 of the calendar year the Match opens and 9 pm eastern time on the Rank Order List Certification Deadline in the year of the Match; also referred to as an MD senior.

SSP

Sigma Sigma Phi national osteopathic medical honor society.

U.S. Citizen Student/Graduate of International Medical School (U.S. IMG)

A U.S. citizen who enrolled in, or is a graduate of, a medical school outside the United States and Canada that is not accredited by the Liaison Committee on Medical Education (LCME), the American Osteopathic Association Commission on Osteopathic College Accreditation (AOA COCA), or the Committee on Accreditation of Canadian Medical Schools (CACMS).

USMLE®

United States Medical Licensing Examination®.

Volunteer Experiences

The number of experiences during medical school, graduate school, or undergraduate school where the applicant freely gave time and labor to a project, task, job, or service without payment.

Work Experiences

The number of experiences during medical school, graduate school, or undergraduate school where the applicant was paid for knowledge or skills they applied to a particular field or job.

2026 Tables and Charts for All Specialties

Chart

1

**Active Applicants in the Main Residency Match
by Applicant Type**

Chart 1 shows the number of active applicants (i.e., applicants who have certified a rank order list) by applicant type in the 2026 Main Residency Match. A total of 48,050 active applicants participated in the 2026 Main Residency Match. U.S. MD seniors constituted the largest group, comprising 43.6 percent of applicants in the Match. The second largest group of active applicants were non-U.S. IMGs at 24.9 percent, followed by U.S. DO seniors at 17.7 percent.

Table 1 **Number of Applicants and Positions in the Main Residency Match
by Preferred Specialty**

Table 1 provides a summary of the number of positions offered in selected specialties, the number of applicants who preferred each specialty (i.e., specialty of the first-ranked program on an applicant's rank order list), and the number of non-U.S. IMGs who preferred each specialty.

Only those specialties offering 50 or more positions are included. For those specialties offering both PGY-1 and PGY-2 positions (including Physician (R) positions), all position types have been combined.

For example, a total of 2,988 applicants preferred Anesthesiology, among whom 230 are non-U.S. IMGs. Of the 230 non-U.S. IMGs who preferred Anesthesiology, 89 matched and 141 did not match to their preferred specialty. For each of the 2,290 positions offered, there were 1.30 applicants who preferred the specialty, including 0.10 non-U.S. IMGs per position.

Data for non-U.S. IMGs who preferred Emergency Medicine/Family Medicine, Internal Medicine/Medical Genetics, Internal Medicine/Preventive Medicine, Internal Medicine/Psychiatry, Neurodevelopmental Disabilities, Osteopathic Neuromusculoskeletal Medicine, Pediatrics/Medical Genetics, Pediatrics/Psych/Child Psychiatry, Psychiatry/Family Medicine and Psychiatry/Neurology are excluded from this report as these specialties offered fewer than 50 positions.

Preferred Specialty	Total Positions Offered	Total Number of All Applicants	Number of All Applicants per Position	Non-U.S. IMGs Matched	Non-U.S. IMGs Not Matched	Total Non-U.S. IMGs	Non-U.S. IMGs per Position
Anesthesiology	2,290	2,988	1.30	89	141	230	0.10
Child Neurology	243	249	1.02	26	24	50	0.21
Dermatology	602	1,099	1.83	5	25	30	0.05
Emergency Medicine	3,198	3,224	1.01	80	68	148	0.05
Family Medicine	5,491	4,685	0.85	599	513	1,112	0.20
Internal Medicine	11,632	14,734	1.27	3,392	3,600	6,992	0.60
Internal Medicine/Pediatrics	404	468	1.16	8	16	24	0.06
Interventional Radiology (Integrated)	245	276	1.13	14	15	29	0.12
Neurological Surgery	280	480	1.71	15	43	58	0.21
Neurology	1,260	1,689	1.34	215	298	513	0.41
Obstetrics and Gynecology	1,638	2,140	1.31	44	90	134	0.08
Orthopaedic Surgery	963	1,598	1.66	5	17	22	0.02
Otolaryngology	403	580	1.44	7	10	17	0.04
Pathology-Anatomic and Clinical	636	957	1.50	169	206	375	0.59
Pediatrics	3,185	3,023	0.95	542	249	791	0.25

Preferred Specialty	Total Positions Offered	Total Number of All Applicants	Number of All Applicants per Position	Non-U.S. IMGs Matched	Non-U.S. IMGs Not Matched	Total Non-U.S. IMGs	Non-U.S. IMGs per Position
Physical Medicine and Rehabilitation	601	828	1.38	21	18	39	0.06
Plastic Surgery (Integrated)	230	406	1.77	5	22	27	0.12
Psychiatry	2,516	2,873	1.14	219	156	375	0.15
Public Health and Preventive Medicine	63	61	0.97	3	2	5	0.08
Radiation Oncology	187	222	1.19	18	17	35	0.19
Radiology-Diagnostic	1,268	1,419	1.12	102	73	175	0.14
Surgery-General	1,807	2,760	1.53	124	309	433	0.24
Thoracic Surgery (Integrated)	56	89	1.59	2	5	7	0.13
Vascular Surgery (Integrated)	110	165	1.50	4	24	28	0.25
§ Other Specialties	281	330	1.17	13	23	36	0.13
Total	39,589	47,343		5,721	5,964	11,685	

Note:

§ Other specialties represent preferred specialties that offered fewer than 50 positions.

Applicants who preferred a preliminary program or a one-year transitional program are excluded from the table.

Chart
2Ratio of Non-U.S. IMGs Ranking Specialty First / Available Positions
by Preferred Specialty

Chart 2 shows the ratios of non-U.S. IMGs and all applicants who preferred each specialty to available positions in that specialty.

Among all specialties in the chart, Internal Medicine and Pathology-Anatomic and Clinical had the highest ratio (0.6) of non-U.S. IMGs to positions offered.

Orthopaedic Surgery and Otolaryngology have the lowest displayed ratio (0.0) of non-U.S. IMGs to positions offered. Because ratios are rounded to one decimal place, the 0.0 value reflects very low interest among non-U.S. IMGs relative to available positions, not necessarily an absence of non-U.S. IMGs preferring the specialty.

Chart

3

Match Rates of Non-U.S. IMGs

Percent Matched by Preferred Specialty

Chart 3 shows the percentages of non-U.S. IMGs who matched to their preferred specialty. Overall, 41.5 percent of non-U.S. IMGs matched to their preferred specialty, ranging from a high of 68.5 percent (Pediatrics) to a low of 14.3 percent (Vascular Surgery (Integrated)).

Table 2

Summary Statistics on Non-U.S. IMGs

All Specialties Combined

Table 2 provides summary statistics for all specialties, including those offering fewer than 50 positions, by Match outcome on the 11 measures presented in this report.

Data on each of these measures are displayed graphically by preferred specialty on the following pages.

Only non-U.S. IMGs who gave consent to provide their academic information for use in research are included in this table and the rest of the report.

Measure	Matched (n=4,429)	Not Matched (n=4,541)
1. Median number of contiguous ranks	5.0	2.0
2. Median number of distinct specialties ranked	1.0	1.0
3. Median USMLE Step 2 CK score ‡	248	242
4. Median number of research experiences ¶	3.0	3.0
5. Median number of abstracts ¶	2.0	2.0
6. Median number of presentations ¶	2.0	2.0
7. Median number of publications ¶	3.0	3.0
8. Median number of work experiences ¶	3.0	3.0
9. Median number of volunteer experiences ¶	3.0	3.0
10. Percentage who have Ph.D. degree ¶	2.2	2.0
11. Percentage who have another graduate degree ¶	21.1	24.3

Note:

‡ USMLE Step 2 CK scores are primary source through direct partnership with the USMLE program and its sponsor organizations.

¶ Data self-reported by applicants during the Main Residency Match registration process.

Chart

4

Median Number of Contiguous Ranks of Non-U.S. IMGs by Preferred Specialty and Match Status

In general, applicants are more likely to Match if they rank more programs in their desired specialty. To quantify this aspect of applicant behavior, the number of programs ranked in the first-choice specialty were tallied before a program in another specialty appeared on the applicant's rank order list (i.e., number of contiguous ranks).

Chart 4 displays the median number of contiguous ranks by preferred specialty for non-U.S. IMGs who matched or did not match to their preferred specialty. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart. Radiation Oncology had the longest median contiguous rank list (11) for matched non-U.S. IMGs while Internal Medicine/Pediatrics had the shortest (1). For most specialties, non-U.S. IMGs who matched to their preferred specialty had median contiguous rank lists that were longer than those of non-U.S. IMGs who did not match. Based on these data, applicants with longer rank order lists appear to have a higher likelihood of matching than those with shorter ones.

Table
3
**Summary Statistics for Contiguous Ranks Among Non-U.S. IMGs
by Preferred Specialty and Match Status**

Table 3 presents summary statistics for number of contiguous ranks by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of contiguous ranks was 4.0 with a minimum of 1 and a maximum of 21. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of contiguous ranks was 2.0 with a minimum of 1 and a maximum of 13.

Preferred Specialty	Consented Applicants	Minimum	First Quartile (Q1)	Median	Third Quartile (Q3)	Maximum	IQR (Q3-Q1)	Mean	Std Dev
Anesthesiology									
<i>Matched</i>	76	1	3.0	4.0	7.0	21	4.0	5.1	3.6

Chart

5

Median Number of Distinct Specialties Ranked by Non-U.S. IMGs by Preferred Specialty and Match Status

Some applicants are interested in a single specialty while others consider two or more.

Chart 5 displays the median number of distinct specialties ranked by preferred specialty and Match outcome. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart. For most specialties, the variance in the median number of distinct specialties ranked for matched vs not matched non-U.S. IMGs is small.

Table
4
**Summary Statistics for Ranked Specialties Among Non-U.S. IMGs
by Preferred Specialty and Match Status**

Table 4 presents summary statistics for number of distinct specialties ranked by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of distinct specialties ranked was 1.5 with a minimum of 1 and a maximum of 5. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of distinct specialties ranked was 2.0 with a minimum of 1 and a maximum of 6.

Chart

6

Median USMLE Step 2 CK Scores of Non-U.S. IMGs by Preferred Specialty and Match Status

United States Medical Licensing Examination® (USMLE®) Step 2 Clinical Knowledge (CK) scores are a measure of an applicant's ability to apply the medical knowledge, skills, and understanding of clinical science essential for providing patient care.

Chart 6 shows median USMLE Step 2 CK scores for non-U.S. IMGs by preferred specialty and Match status. All data is primary source through direct partnership with the USMLE program and its sponsor organizations. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table
5
**Summary Statistics for USMLE Step 2 CK Scores Among Non-U.S. IMGs
by Preferred Specialty and Match Status**

Table 5 presents summary statistics for USMLE Step 2 CK score by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median USMLE Step 2 CK score was 255 with a minimum of 212 and a maximum of 274. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median USMLE Step 2 CK score was 247 with a minimum of 219 and a maximum of 280.

Chart

7

Median Number of Research Experiences of Non-U.S. IMGs by Preferred Specialty and Match Status

Research experiences represent the number of experiences during medical school, graduate school, or undergraduate school where the senior reported serving as a member of a research team. This information is self-reported by applicants during the Main Residency Match registration process. The experiences are not verified or evaluated and quality may vary greatly.

Chart 7 shows the median number of research experiences of non-U.S. IMGs by preferred specialty and Match outcome. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table
6

Summary Statistics for Research Experiences Among Non-U.S. IMGs by Preferred Specialty and Match Status

Table 6 presents summary statistics for number of research experiences by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of research experiences was 4.0 with a minimum of 0 and a maximum of 35. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of research experiences was 3.0 with a minimum of 0 and a maximum of 32.

Chart

8

Median Number of Abstracts of Non-U.S. IMGs by Preferred Specialty and Match Status

Abstracts represent only the number of abstracts that were accepted for presentation at a professional conference/meeting and were subsequently published in a peer-reviewed journal.

This information is self-reported by applicants during the Main Residency Match registration process. Products are not verified or evaluated and quality may vary greatly.

Note that prior to 2026, abstracts, presentations, and publications were assessed using a single item and have now been separated into three distinct items.

Chart 8 shows the median number of abstracts by preferred specialty and Match status. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Summary Statistics for Abstracts Among Non-U.S. IMGs
by Preferred Specialty and Match Status

Table 7 presents summary statistics for number of abstracts by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of abstracts was 3.0 with a minimum of 0 and a maximum of 33. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of abstracts was 2.0 with a minimum of 0 and a maximum of 14.

Chart

9

Median Number of Presentations of Non-U.S. IMGs by Preferred Specialty and Match Status

Presentations represent only the number of presentations that were poster or oral presentations at professional conferences/meetings or school research days/forums.

This information is self-reported by applicants during the Main Residency Match registration process. Products are not verified or evaluated and quality may vary greatly.

Note that prior to 2026, abstracts, presentations, and publications were assessed using a single item and have now been separated into three distinct items.

Chart 9 shows the median number of presentations by preferred specialty and Match status. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table 8 **Summary Statistics for Presentations Among Non-U.S. IMGs**
by Preferred Specialty and Match Status

Table 8 presents summary statistics for number of presentations by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of presentations was 4.0 with a minimum of 0 and a maximum of 24. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of presentations was 2.0 with a minimum of 0 and a maximum of 15.

Chart
10Median Number of Publications of Non-U.S. IMGs
by Preferred Specialty and Match Status

Publications represent only the number of publications that were peer-reviewed works such as journal articles, book chapters, and online publications as well as scientific monographs and case reports.

This information is self-reported by applicants during the Main Residency Match registration process. Products are not verified or evaluated and quality may vary greatly.

Note that prior to 2026, abstracts, presentations, and publications were assessed using a single item and have now been separated into three distinct items.

Chart 10 shows the median number of publications by preferred specialty and Match status. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table
9
**Summary Statistics for Publications Among Non-U.S. IMGs
by Preferred Specialty and Match Status**

Table 9 presents summary statistics for number of publications by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of publications was 4.0 with a minimum of 0 and a maximum of 69. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of publications was 2.0 with a minimum of 0 and a maximum of 40.

**Chart
11****Median Number of Work Experiences of Non-U.S. IMGs
by Preferred Specialty and Match Status**

Work experiences represent the number of experiences during medical school, graduate school, or undergraduate school where the applicant was paid for knowledge or skills they applied to a particular field or job.

This information is self-reported by applicants during the Main Residency Match registration process. Experiences are not verified or evaluated and quality may vary greatly.

Chart 11 shows the median number of work experiences by preferred specialty and Match status. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table
10
**Summary Statistics for Work Experiences Among Non-U.S. IMGs
by Preferred Specialty and Match Status**

Table 10 presents summary statistics for number of work experiences by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of work experiences was 3.0 with a minimum of 0 and a maximum of 12. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of work experiences was 3.0 with a minimum of 0 and a maximum of 10.

Chart
12

Median Number of Volunteer Experiences of Non-U.S. IMGs
by Preferred Specialty and Match Status

Volunteer experiences represent the number of experiences during medical school, graduate school, or undergraduate school where the applicant freely gave time and labor to a project, task, job, or service without payment.

This information is self-reported by applicants during the Main Residency Match registration process. Experiences are not verified or evaluated and quality may vary greatly.

Chart 12 displays the median number of volunteer experiences by preferred specialty and Match status. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Table
11

Summary Statistics for Volunteer Experiences Among Non-U.S. IMGs by Preferred Specialty and Match Status

Table 11 presents summary statistics for number of volunteer experiences by preferred specialty and Match status for non-U.S. IMGs who consented to use of their data for research and reporting. Data for specialty and Match status combinations with fewer than five consented applicants are denoted by an asterisk (*).

For each preferred specialty and Match status, number of consented applicants (N), minimum, first quartile (Q1), median, third quartile (Q3), interquartile range (IQR = Q3 – Q1), maximum, mean, and standard deviation are displayed.

Taking Anesthesiology as an example, among the 76 applicants who preferred and matched to Anesthesiology, the median number of volunteer experiences was 3.0 with a minimum of 0 and a maximum of 10. Among those who preferred Anesthesiology and did not match within Anesthesiology, the median number of volunteer experiences was 3.0 with a minimum of 0 and a maximum of 44.

Chart 13

Percentage of Non-U.S. IMGs Who Have a Ph.D. by Preferred Specialty and Match Status

Chart 13 shows by preferred specialty and Match status the percentage of non-U.S. IMGs who have a Ph.D. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart.

Data on Ph.D. status are self-reported.

Chart
14

Percentage of Non-U.S. IMGs Who Have a Graduate Degree
by Preferred Specialty and Match Status

Chart 14 shows by preferred specialty and Match status the percentage of non-U.S. IMGs who have a graduate degree other than a Ph.D. Specialty and Match status combinations with fewer than five consented applicants are not presented in the chart. For most specialties, the percentage of not matched non-U.S. IMGs who have other graduate degrees was higher than that of their matched counterparts.

Data on other graduate degree status are self-reported.

Note:

- USMLE Step 2 CK scores are primary source through direct partnership with the USMLE program and its sponsor organizations.
- Data for Matched cohort are not shown in the chart because they did not meet the minimum reporting threshold of five consented non-U.S. IMGs.

Graph
VS-2

Probability of Non-U.S. IMGs Matching to Preferred Specialty by USMLE
Step 2 CK Score
Vascular Surgery (Integrated)

Note:

- Probability analyses are based on USMLE Step 2 CK scores of those who participated in the Match in 2024, 2025, and 2026, and consented to use their data for research and reporting purposes.

Chart

VS-4

Number of Research Experiences of Non-U.S. IMGs

Vascular Surgery (Integrated)

Note:
Data for Matched cohort are not shown in the chart because they did not meet the minimum reporting threshold of five consented non-U.S. IMGs.

Chart

VS-5

Number of Work Experiences of Non-U.S. IMGs

Vascular Surgery (Integrated)

Note:
Data for Matched cohort are not shown in the chart because they did not meet the minimum reporting threshold of five consented non-U.S. IMGs.

Chart

VS-8

Number of Presentations of Non-U.S. IMGs

Vascular Surgery (Integrated)

Note:
Data for Matched cohort are not shown in the chart because they did not meet the minimum reporting threshold of five consented non-U.S. IMGs.

Chart

VS-9

Number of Publications of Non-U.S. IMGs

Vascular Surgery (Integrated)

Note:
Data for Matched cohort are not shown in the chart because they did not meet the minimum reporting threshold of five consented non-U.S. IMGs.
